

# ProSheets

## 1.2.0.2

### Using environment variables/placeholder

Built-in ProSheets variables:

%Y = Year

%m = Month

%d = Day

%H = Hour

%M = Minute

%S = Seconds

%UserName% = Current computer username

ProSheets also supports native windows environment variables (e.g., %UserProfile%)

### Practical example:

%UserProfile%/documents/DiRoots/ProSheets/%Y-%m

=

C:\Users\\Documents\DiRoots\ProSheets\2019-12
